HEWLETT PACKARD	VP6300	L1695A - DIAMOND

The performance of today's projectors owe a great deal to the development of projector lamps. These lamps are at the cutting edge of lighting technology, operating at exceptional pressure and temperature levels. Only the world's leading lighting manufacturers have been able to produce lamps to the necessary performance, reliability and longevity standards required by the projector brands. To-date there have been only seven: Philips, Osram, Ushio, Phoenix, Iwasaki, Matsushita and Epson and between them they hold many patents for the technologies involved.

All the different projector brands source their lamps from these companies and fit them into cages which fit into their projectors allowing simple and safe user replacement.

Beware Copies

Some companies in SE Asia have now created copies of many of the original lamps and sell them into the replacement market as both lamps and modules. These copies are often referred to as 'compatible' and generally offer lower performance, poor reliability and reduced lifetimes (false economy), in many cases they are breaking patent laws.

Diamond Lamps has a unique set of agreements to buy lamps directly from the original manufacturers and, with their endorsement, to fit them into its own cages for sale directly into the replacement market. It now offers lamp modules for thousands of projector models from all leading projector brands and each one uses the same original lamp from the same supplier as that used by the projector manufacturer in its own lamp module.

Resellers can be sure that selling Diamond Lamps carries no risk-neither litigious for IP infringement, nor commercial for supply of underperforming product.

Users can be sure of 100% original performance, reliability and lifetime. And, thanks to Diamond Lamps' direct route to market, they can benefit from greatly reduced prices.
